Hello Art,

As I emailed you, our proposed BA Astronomy and BS Astrophysics options were approved, but the astronomy minor was not. The astros rapidly converged on the following language:

The minor in astronomy consists of

- **Four semesters of introductory physics and astronomy (PHYS 116, 117; ASTR 101, 102)**
- **1-credit of introductory astronomy laboratory (ASTR 101L or 111L)**
- **One course chosen from ASTR 301, 519**

which I emailed to Erika.

If you reply to this email with your approval, the Administrative Boards will take this up at their last meeting, on the 20th.

Thanks!
Dan
